The book provides basic, systematic, and academic knowledge of industrialization. Specifically, it consists of:

- A system of basic theoretical issues of industrialization. It presents models of industrialization and assessment criteria to measure the success of industrialization models and the basic conditions necessary to ensure the success of industrialization.

- A review of typical industrialization models in a number of countries in order to withdraw lessons that can be applied for successful industrialization.

- An assessment of industrialization models that have been applied in Vietnam from 1960 until the present day and proposals for new models for the period 2011-2020.

- "This is a greatly useful reference book for undergraduate and graduate students. It is one of very few books studying the history of industrialization carried out by humankind over the past three hundred years. The author clarifies historical conditions for the emergence of industrialization models, pre-conditions and conditions to implement industrialization successfully and analyzes industrialization-related issues in Vietnam in the light of subjective and objective factors that are different from earlier models,… »

   Prof.Dr. Tran Ngoc Hien
   Former Vice Director Ho Chi Minh National Academy of Politics and Public Administration

- "This highly scientific work contains a rich source of historical data. It is a worthy reference for undergraduate and graduate students. The book suggests issues that need further discussion, especially academic ones…”
Prof. Dr. Do The Tung  
Former Director Institute of Political Economy  
Ho Chi Minh National Academy of Politics and Public Administration
