Sustainable development of tourism in Van Don district, Quang Ninh province

Tran Thi Hong Nhung

Abstract:
Sustainable development is the goal of all national economies in the world as well as of each specific industry, especially for tourism, a resource-oriented economic branch. In Vietnam, nowadays, the development of tourism is faced with real problems that will have negative impacts on the long-term development of this sector. So these problems should be considered on national-scale studies as well as in each locality to find out the most effective and feasible measures for tourism in order to achieve the goal of sustainable development. Van Don District of Quang Ninh province is in more favorable conditions for tourist development. Based on the available potential, in recent years, the province's tourism has grown rapidly, creating a large source of revenue for local and high income for people and communities. However, in the process of development, there are still a lot of limitations and negative impacts on long-term development of tourism and the local economy.

This report will focus on the analysis of conditions and real state for development of tourism in Van Don District, Quang Ninh province. Based on the local field surveys, direct interviews with local managers and operational staff in the industry as well as local people, this article will propose some effective solutions for sustainable tourist development in this locality. The assessment of sustainable development was carried out on all three aspects: economic, social and environment.
